California 911 System

CA 911 Outages		
Northern California	Central California	Southern California
No 911 Outages	No 911 Outages	911 Outages

911 Outages/Remote/Community Isolations:

On 12/5/17, the Frontier Santa Paula remote central office in Ventura County reported that 329 landlines had no dial tone due to power failure as a result of the Thomas Fire. Currently, these customers are unable to dial out to 911. However, wireless service is not impacted at this time. The Public Safety Answering Point (PSAP), Ventura County Sheriffs Office (VCSO), are taking calls normally and have been notified of the isolation.

- Per the CA 911 and Law Branch on 12/13/17 at 0631 hours:
 - A route has been cleared to conduct repairs. Frontier requested a technician to be dispatched as of 12/12/17 at 1700 hours.
 - At this time, there is no estimated time to restore (ETTR) service at this time.
 - Frontier will update the Cal OES 911 Branch when a technician has been dispatched.

Service Interruptions:

Per the CA 911 Branch on 12/13/17 at 1009 hours:

On 12/13/17 CA 911 Branch advises that due to massive infrastructure damage caused by the Thomas Fire, the ongoing wireline community isolation in Santa Paula will not be resolved in the immediate future.

- Per Frontier, the remote office has power but the destroyed lines and poles in the area will need to be repaired before service can be re-established.
- A temporary microwave solution is being stood up in the area, however even with the microwave solution, those individuals customers with damaged distribution lines will still be out of landline service.
- No ETTR has been provided at this time, Frontier will provide a status update on 12/15/17.

WEATHER OF CONCERN

Weather of Concern

- Gusty northeast winds are expected to continue through much of this week, especially over Central and Southern California. Gusts up to 30 to 40 mph can be expected today, then increase to 40 to 50 mph by early tomorrow.
- The gusty offshore winds, very low relative humidity, unseasonably warm temperatures, and extremely dry fuels will allow the extreme fire danger to continue.

Active Weather Warnings, Watches and Advisories by County:

- <https://alerts-v2.weather.gov/counties/CA>

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

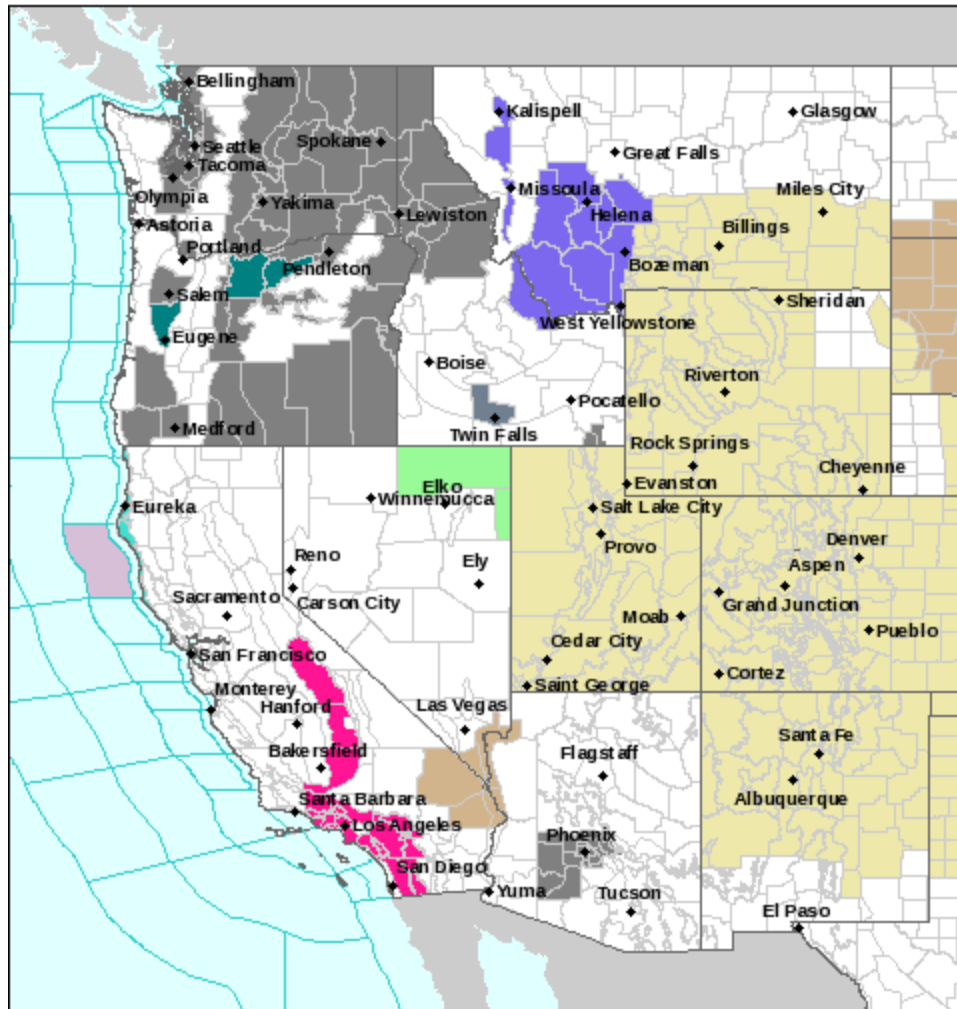

Little change in the overall forecast for the next 7 to 10 days. Weather models remain steady in depicting 3 different, generally dry, cold frontal passages. The first one will be quite weak and lead to localized stronger N to NE gusts between 20 to 30 mph along the west slopes of the Cascade and Sierra ranges tonight and Thursday. The second system will provide an actual brief break down of the dominant ridge pattern the area has been receiving later Friday and Saturday. N to NE wind speeds will be much stronger than the first cold frontal system and impact more of the area. Expect general gusts between 30 to 40 mph with localized readings up to 60 mph. The flow will weaken during the day period on Sunday and turn more offshore. The ridge will slowly build early next week with an eventual return to onshore flow ahead of the third cold frontal passage late next week. This frontal passage appears to be even stronger or cooler than the weekend cold frontal passage. Very little, if any precipitation, is expected with the aforementioned frontal passages. Humidity values will tend to be unusually low for this time of year with slight increases ahead of each frontal system. The air mass looks to be very dry during the weekend period. Afternoon temperatures should generally range between 5 to 15 degrees above normal until the strongest cold frontal passage late next week.

SOUTHERN CALIFORNIA

A light offshore flow covers the area this morning. The strongest winds are over Ventura and northern Los Angeles County where some gusts to 35 mph are occurring. Look for relatively light offshore flow to continue throughout the day. But a weak low dropping into the Southwest along with surface high pressure over northwest Nevada will lead to an increase in offshore winds Thursday. By daybreak Thursday, widespread offshore winds of 15-30 mph with gusts approaching 50 mph will be possible over the region. The strongest winds will likely occur over the same areas of Ventura and Los Angeles Counties. In addition, the Sierras will see extremely dry conditions with localized, infrequent gusty winds west of the Crest. Temperatures today will be in the 50s in the mountains to the 80s at lower elevations of Southern CA. Temperatures may drop several degrees across inland areas Thursday, but it will be warm near the coast once again. In addition, north winds of 20-30 mph will cover the Mojave Desert Thursday. Minimum RH will continue to be extremely low with values below 5% in some areas the next few days. Poor recovery can be expected each night. A weak trough will lead to a brief resumption of onshore flow Friday night into Saturday which should allow one night of good RH recovery for most areas. Southwesterly flow Saturday may lead to a substantial increase in smoke across the district. Another low developing over the Southwest will lead to another round of moderate offshore winds Sunday. Long range models indicate there may be chances for light precipitation in the Sierras beginning on the 23rd, but a widespread, significant precipitation event looks elusive at this time.
